EDUCATION

University of California, Davis

Davis, CA

Bachelor of Science in Computer Science and Engineering, Minor in Electrical Engineering

Sep. 2018 – June 2022

EXPERIENCE

Semiconductor Product Validation Technician (contract)

April 2026 - Present

NVIDIA

Santa Clara, CA

- **Integration:** Assembled CPUs and server boards from 20 different components like GPU, BMC, MCU
- **Troubleshooting:** Performed 3 different tests on 35 server boards through Linux and Python scripts, screening potential defects
- **Thermal material:** Utilized thermal material, ensuring appropriate coverage of servers for thermal tests

Debug Repair Technician (contract)

Feb 2026 – April 2026

Quanta Manufacturing

Fremont, CA

- **Causal Analysis:** Orchestrated root cause analysis and resolved 10 hardware defects on server boards
- **Linux Scripting:** Leveraged Linux/Cygwin environment to run 20 bash shell scripts to debug system features for server boards
- **Summarize results/repairs:** Harnessed Excel and 3 Repair applications to summarize reports for each server boards and each defected components

Thermal SQA Engineer (contract)

Jan 2025 – May 2025

Apple

Cupertino, CA

- **Scalability and Processing data:** Utilized Linux and Python to execute and analyze results of 10 Thermal SQA tests for a variety of Mac units
- **Innovative Solutions:** Implemented Thermal couples to numerous components of Mac computers to precisely quantify warmth in 3 different temperature environments
- **Hand tools:** Applied various hand tools like screwdrivers and pliers to assemble 4 hardware components for Mac units suitable for SQA testing

Server Repair Technician (contract)

Nov. 2023 – Mar. 2024

Wistron Corporation

Santa Clara, CA

- **Failure Analysis:** Performed failure analysis on many Vulcan and Viking boards to identify hardware defects
- **Automation framework:** Utilized CLI with Linux for 2 automated Vulcan board quality assurance tests
- **Digital Circuitry:** Assembled 9 different components of Vulcan boards to enhance hardware issue diagnosis

PROJECTS

Clear Lake Data Visualizations | *JavaScript, React, HTML, CSS, SQL*

Jan. 2022 – Jun. 2022

- Worked within a team of 4 to develop a website that demonstrates data visualizations.
- Adopted the contents from data packages to appropriately plot data visualizations for our website
- Formulated HTML, CSS, Javascript, and React to develop our React Application of the website
- Assembled features like current weather, wind maps, and dropdown menus for different data visualizations.

UNO Lightning | *C++, Linux*

Jun. 2023 – Current

- Reworked the classic UNO game with 2 additional cards: LIGHTNING card and PARDON card
- Employed abstraction and functions to reduce code complexity and code usage
- Applied troubleshooting and testing skills to ensure smooth gameplay
- Incorporated understanding of game design to determine the limitations of LIGHTNING and PARDON cards

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL, JavaScript, HTML/CSS, MATLAB, Rust, Go, Lisp, Prolog, Ruby, CSharp, Linux

Electrical Engineering Tools: Oscilloscope, Voltimeter, Multimeter, ADALM2000, resistors, capacitors, inductors, op-amp, Vulcan boards, Failure Analysis, Hardware Troubleshooting

Frameworks: React, Node.js, JUnit, AWS

Developer Tools: Git, Github, Docker, Visual Studio Code, Visual Studio, PyCharm, Eclipse, BitBucket, SourceTree, MS Office
